

CathGuard™ Patient Catheter Protective Pocket

CathGuard™ is a unique, water-resistant, soft fabric, protective pocket providing maximum patient comfort while protecting and storing the exterior lumen of the patient's central line catheter between dialysis treatments. A patient's catheter can be quickly and easily placed into the pocket. Each CathGuard™ pocket has its own self-adhesive strips for attaching the pocket to the patient's skin. CathGuard™ adhesive strips are designed to attach the pocket securely to the patient, yet make the pocket easy to remove without causing discomfort for the patient. **Our newly engineered material is now softer for even greater comfort while providing the same catheter protection you can count on.**

- ◆ Protects patient and catheter. Soft, water-resistant fabric pocket.
- ◆ Eliminates mess and fuss of dealing with tape and gauze.
- ◆ Very gentle to skin. Won't cause allergic reactions.

- ◆ Simplifying patient off time between dialysis treatments.
- ◆ Easy-to-use: insert catheter; remove backing; attach to patient's skin.
- ◆ Cost-effective, unique product. Well-liked by patients and staff.

Use of CathGuard™ helps to immobilize the patient's catheter and may reduce discomfort and irritation at the catheter surgical insertion site. In addition, CathGuard™ keeps the catheter clean, may help prevent infections, safeguards the integrity of the catheter caps, and presents a flatter, less-visible profile.

RPC also offers high quality, cost-effective non-injectable catheter caps (REF 7001-3915, 100 per case).
