Citra-Quik™ Citric Acid

RPC's cost effective citric acid powder produces the highest quality liquid solutions for acid rinse cleaning and descaling of dialysis machines, bicarb mixers, loops and RO membranes. Bicarbonate based dialysate results in carbonate scaling within hemodialysis machines over time. This build up will eventually precipitate and cause the dialysis machine to malfunction. Citric acid from RPC is easy to use. Multiple sizes allow flexibility to choose the desired effective concentration (typically 5%-50%) for any type of equipment being maintained. Clinical studies show that RPC's citric acid dissolved completely into solution several times faster than any competitor's citric acid, even at cold water temperatures. This can save a lot of time and prevent citric acid particulates from entering the dialysis machine. Citric acid is excellent for other purposes, such as removing corrosion from stainless steel or dried dialysate from plastic. Each package contains the highest quality USP anhydrous grade citric acid manufactured in the USA.

Features & Benefits:

- Replaces hazardous chemicals
- No obnoxious fumes as with vinegar
- Dissolves quickly in AAMI quality water
- Quick and efficient for removing deposits
- Conserve storage space
- Reduce shipping costs
- Prevent downtime due to machine malfunctions
