

P/N D300-2010 E-Z-Draw® Sample Port with Hose Barbs

RPC offers the E-Z-Draw® Dialysate Sample Port. Use of E-Z-Draw® in a dialysis machine dialysate fluid pathway provides a fast, safe, and reliable means for drawing a dialysate test sample. Simply insert the male luer end of a syringe into the E-Z-Draw® port, withdraw the syringe plunger to the required sample volume, and remove the syringe.

A low-profile and uncomplicated design, using a low surface friction material, helps minimize the potential for bacterial growth in the E-Z-Draw® sample port. E-Z-Draw® is compatible with all standard dialysis germicides and is safe for use on dialysis machines utilizing heat disinfection. There are no disposable parts to replace as with other devices. A recent RPC tooling acquisition and improvement assures 100 percent quality in every E-Z-Draw® along with off-the-shelf availability from stock.

Fits 1/4" to 5/16" I.D. Tubing
