Isopure Cleaners

Only available through RPC, Isopure RO cleaners allow for one stop technical shopping from RPC your dialysis technical leader and partner. TFC membranes tolerate the cleaning solutions and osmotic pressures affected by the HydroBLAST™ process. They have been found to retain their initial flux rate for extended periods of time when properly maintained and serviced. Sanitizes both the feed and product side of membrane quickly, with no hazardous chemicals. Process dissolves inorganic scale and eliminates bio-growth on both feed and permeate surfaces of the membranes, removes naturally occurring oils, other organic compounds and bacterial/algae-related slime and returns the membrane flux rate to virtually 100% of its initial volume. Eliminates bio-fouling, chemical scaling, and colloidal plugging. The special formulation provides greatest removal of dissolved solids including fluorides and aluminum. Completely removes bio-film and particles from membrane surface, allowing cleaning agent to contact and kill microorganisms.

- ◆ Formulated with high performance polymers.
- ◆ Easy to rinse away and restart system.
- ◆ Highly effective at ambient or elevated temperatures.

- ◆ Improved sanitation and longer membrane life.
- ◆ Reduces maintenance and operating costs.
- ◆ Compatible with all membranes except cellulose acetate.

For use on your ISOPURE water system and all commonly used brands. Unique Liquid formulations provide fast and fully diluted solutions to your RO membranes. Liquid chemicals go into solution much quicker. Avoid messy powders as particles can become airborne and use can be difficult to produce proper dilutions with standard mixing producing lumps of un-dissolved powder in the cleaning tanks. Maximize product water purity and minimize service and replacement costs. HydroBLAST™ process uses environmentally safe solutions which may be disposed of readily.
