E-Z Chek® Residual Chlorine Test Strips

Following disinfection with sodium hypochlorite (bleach), E-Z Chek® Residual Chlorine Test Strips provide a convenient and accurate means of measuring the concentration of chlorine bleach remaining in water being used to rinse out dialysis machines, water distribution loops, and containers. A rapid screening (qualitative) method will indicate the presence of levels above 0.5 ppm or the use of a 30 second quantitative method provides a more accurate determination of concentrations between 0 and 5 ppm.

- ◆ Eliminate messy and time consuming reagent tests and instruments
- ◆ Five color blocks for easy, accurate testing of residual chlorine
- ◆ Quick and easy 5 second qualitative or 30 second quantitative test

- ◆ Verify compliance with AAMI/CMS requirements for bleach residuals
- ◆ Accurate, low cost strips detect levels above 0.5 ppm & between 0-5ppm
- ◆ FDA cleared for testing residual chlorine levels in dialysis rinse water.

E-Z Chek® Residual Chlorine Test Strips are supplied in a ready to use form. A Certi-Chek™ certificate of conformance for QC validation is available for each test strip type, by lot number. When using RPC test strips all test strip instructions for use, including storage and handling requirements, must be followed. Labeled product shelf life is valid for unopened containers and for opened containers which are immediately resealed and kept in storage conditions as stated in the instructions for use. RPC test strips provide you with multiple options for measuring and monitoring critical dialysis fluids. RPC test strips help maximize quality in your dialysis program and minimize risk when testing dialysis fluids.
