Ultra-Low™ Total Chlorine Test Strips

RPC's *Ultra-Low™ Total Chlorine Test Strips* were designed and developed specifically for testing very low levels of chlorine and chloramines (TC) in water. Each test strip is individually foil wrapped and has a patented flow-through aperture. These features assure strip stability and maximum sensitivity. Seven color blocks with yellow-to-blue color shades make it easy to differentiate between values. RPC's Ultra-Low™ Total Chlorine Test Strips provide easy testing for ppm values of 0.0, 0.01, 0.02, 0.05, 0.1, 0.2, and >0.2. Use of a special, non-DPD reagent eliminates manganese interference that has caused problems for DPD tests. Use RPC's Ultra-Low™ Total Chlorine test strips to be confident that chlorine levels in your water do not exceed maximum levels called out in your procedures.

- ◆ Individual foil wrapped strips prevent accidental contamination
- ◆ Patented flow through aperture pad delivers precise measurements
- ◆ Verify compliance with AAMI recommendation for total chlorine

- ◆ Fast 35 - 80 sec. "dip and read" test for total chlorine in water
- ◆ FDA cleared for use in testing total chlorine in water used for dialysis
- ◆ Special reagent not interfered with by manganese (as is DPD)

Ultra-Low™ Total Chlorine Test Strips are supplied in a ready to use form. A Certi-Chek™ certificate of conformance for QC validation is available for each test strip type, by lot number. When using RPC test strips all test strip instructions for use, including storage and handling requirements, must be followed. RPC test strips give you multiple options for measuring and monitoring critical dialysis fluids. RPC test strips help maximize quality in your dialysis program and minimize risk when testing dialysis fluids.

Savings, solutions, satisfaction SM ... all from RPC, the leader in dialysis test strip applications.

Part Number	Description	Packaging
K100-0118	Ultra-Low™ Total Chlorine Test Strips, 0 – 0.2 ppm	100 per pack
480007-CC	Ultra-Low™ Chlorine Color Chart	Each
