E-Z Chek® Dialysis Water pH Test Strips

Routine and accurate pH monitoring of water used for dialysis increases patient safety, is necessary for regulatory compliance, and helps assure proper functioning of dialysis water treatment systems. A water pH value that is too high or too low can present both patient safety issues and water system inefficiencies. To help ensure precise and accurate measurement values across the entire pH range, both the K100-0104 and K100-0104.5 test strips have multiple color pads on each test strip. When reacted, the color pad colors remain true and will not "bleed" off the pads.

Features & Benefits:

- Know your correct pH level within 0.5 and 1 pH increments
- Much more accurate than competing pH strips
- Convenient flip top lid minimizes spills and contamination of strips
- Quick "dip and read" test. Results in seconds!
- Multi-pad indicator ensures accurate results
- FDA 510(k) cleared
- Backed by RPC's Certi-Chek™ program
