High Reliability, Low Cost Replacement Pump Springs

Are you tired of having to replace the “weak” and “strong” A2008 pump springs in your Fresenius dialysis machine prematurely due to corrosion or breakage? Both ‘Weak’ and ‘Strong’ springs are available through RPC. RPC’s pump springs are designed specifically to address this issue. The RPC springs are unequalled in consistency of tensile strength, size, tolerance, and resistance to heat and chemicals. RPC offers top quality equipment replacement component parts which exceed original equipment specifications. Dialysis biomed technicians have reported that after having issues with acid pump springs breaking between PMs they switched to using our springs and have had profound success, including 4 years of use with no breakage.

SAVE!

- ◆ Low cost/high quality alternative to using manufacturer’s part. Saves time & money.
- ◆ Superior and precise specifications result in accurate, long term pump operation.

IMPROVE!

- ◆ Corrosion/rust free. Unique/proven material, unaffected by heat and chemical solutions.
- ◆ Manufactured to exceed OEM specifications. Reduces machine repairs and downtime.

Corrosion, rusting, pitting and eventual breakage of the original equipment manufacturer’s (OEM) springs occurs as a result of insufficient material compatibility with heat, chemicals, and pH changes present within the dialysis machine. RPC replacement springs are made using an advanced technology, proprietary material and process. This unique, yet proven, material/process prevents dialysis machine breakdowns that often occur due to OEM spring corrosion/breakage. **In addition, RPC pump springs eliminate concerns and risks associated with potential patient exposure to dialysate contaminated with OEM spring breakdown material.**

Use RPC replacement parts as a **proven** method for significantly reducing dialysis equipment repair costs while maintaining or improving performance and quality. RPC is an FDA registered medical device manufacturer.
