

SaniGuard™ Non-Injectable Catheter Caps

SaniGuard™ non-injectable, sterile dialysis catheter caps provide healthcare professionals with a dependable, cost-effective solution for protecting dialysis catheter hubs while supporting infection prevention efforts. Manufactured to high-quality standards, these easy-to-use caps help dialysis providers maintain patient safety and operational efficiency.

- Recessed center post minimizes possibility of contamination.
- Luer lock connection for maximum patient safety.
- Cost-effective solution for routine catheter care.
- Sterile, non-pyrogenic, individually wrapped for convenience.

Part Number	Description	Packaging
7001-3915	SaniGuard™ Catheter Cap – Non-injectable - Sterile	100 per box

Dialysis Recirculation Connectors

Designed for convenience and reliability, our sterile dialysis recirculation connectors support a variety of dialysis procedures, including pre-dialysis rinsing, mid-dialysis recirculation, post-dialysis rinse-back, and syringe-to-syringe fluid transfers. Manufactured to high-quality standards, these connectors provide secure connections and efficient handling to help streamline clinical workflows and support patient safety.

- Versatile design supports multiple dialysis and fluid transfer applications.
- Easy-to-grip design for quick and secure use.
- Luer lock connection for maximum patient safety.
- Individually packaged, sterile, and non-pyrogenic to support infection control protocols.

Part Number	Description	Packaging
7001-3902W	Recirculation Connector – Luer Lock – Sterile	100 per box
